### **Streamline and Simplify Payroll -- and Maximize Driver Productivity -- with FREE TrakitGPS *Time & Attendance* Module**

Salt Lake City, UT –[TrakitGPS](#) introduces [TRAKIT Time & Attendance 2.0](#). Specifically designed for the bulk construction industry, TRAKIT Time & Attendance 2.0 is a fully integrated and automated payroll solution that streamlines processes and improves accuracy by allowing material producers and haulers to leverage GPS and mobile devices to capture accurate and new/unique blocks of time, while enabling drivers/employees to clock-in and clock-out right from their truck to maximize productivity. This hosted solution features triple back-up, including one off-site, to ensure payroll data security, and is available at no additional cost with the company's [TRAKIT GPS Fleet Management System](#).

“Employees typically ‘punch in’ in the office, shop or the break room upon arrival. That typically marks the beginning of the traditional 10-minutes plus interlude that includes water-cooler, coffee pot, or chat detours en route to what companies actually pay employees to do. But with the TRAKIT Time & Attendance module, TrakitGPS becomes the company’s time-keeping tool, and the ‘clock- in’ happens when employees actually fire up their vehicle, get behind the wheel, and log into the TrakitGPS system during what is essentially the beginning of the real work they’re paid to do—something of true value to the employer,” says Leon Winter, Senior Vice President, TrakitGPS.

If these salvaged minutes are multiplied by the number of employees in the company’s workforce, it serves as a dramatic illustration of just one of the many quantifiable benefits that the TRAKIT Time & Attendance module brings to a company’s operation. In fact, documentable data provided to TrakitGPS by its customers consistently reflects a conservative average savings of 8% in labor/payroll costs, with some companies claiming labor/payroll savings upwards of 50%. “Recently one of our average-sized customers documented a savings of nearly \$3,000 in payroll costs after just two days of implementing the TRAKIT Time & Attendance module for their fleet of 70 vehicles. It’s simply quite amazing how effective the TrakitGPS system is in modifying behavior for everyone’s benefit, especially in this economy,” adds Jon Wanlass, Development VP, TrakitGPS.

The TRAKIT Time & Attendance module automates and immediately processes most manual payroll activities that have traditionally taken large amounts of time, effort, and resources to accomplish, and that are notoriously susceptible to human error. In addition to automatically capturing accurate and verifiable payroll information, version 2.0 comes with several effective and helpful tools including, among others:

- time-off scheduling and administration
- improved rule customizations
- exception-based timecard management
- improved audit trails

TRAKIT Time & Attendance 2.0 is not just for companies currently using completely manual payroll systems; the module can make a good thing even better with a Custom Payroll Export feature that seamlessly creates and integratable-ready file of a company's critical time-keeping and payroll data for immediate import into any third-party accounting system with no further manipulation or adjustment required. This export will dramatically help to streamline the payroll process and provide improved accuracy and time-savings. Using the TRAKIT Time & Attendance module will also allow companies to capture and split time into regular hours, overtime hours, hours by job, by phase code, by cost codes, use unique payroll rules, and can also be based off premise.

### **About TrakitGPS**

The TRAKIT suite includes industry-specific fleet tracking, biometric tracking, workforce tracking and asset tracking modules that can be utilized on an a la carte basis, or seamlessly integrated with one another to provide a comprehensive signaling, time & attendance fleet/personnel management system. The cornerstone of these solutions, TrakitGPS Fleet Tracking, is an Internet-based, GPS tracking and dispatch tool specifically designed to meet the unique needs of the bulk construction material producers and haulers industry, including complete ticket integration and full interface to most major third-party dispatch systems.

TrakitGPS offers a flexible and cost effective solution by leveraging the Internet, wireless technology and GPS tracking to effectively reduce costs, increase efficiency, and improve asset utilization. TrakitGPS is a fully hosted application that requires no IT staff. It provides to-the-minute order tracking, real-time truck mapping and two-way communication for fleet tracking and management, and provides time-stamped custom reports on all employee activity.
